

Holocaust Dental Gold: Eyewitness Testimony

Eyewitness testimony indicates that gold dental fillings extracted from the teeth of the corpses of holocaust victims was melted down into gold bars at the death camps.

See:

<http://farsi.hdot.org/en/trial/transcripts/day11/pages36-40.html>

This would imply that any dental gold discovered after the cessation of the holocaust which was still in the form of dental fillings, crowns, bridges, etc. the holocaust would represent only a fraction of the total amount of dental gold looted.

Does anyone know if any accurate estimation of the total value of dental gold stolen by the Nazis has ever been attempted?

Keith P Walsh

PS, As I understand it, people who simply disregard eyewitness testimonies because they do not fit in with their own view of events with regard the Nazi holocaust are called "holocaust deniers".
